When the standing and reaching activity starts, the screen will be blank except for showing the child.
Bubbles of different colors will gradually appear on the screen.
Bubbles of different colors will gradually appear on the screen.
When the child reaches and pops a bubble, the screen will fill with the color of that bubble and a random sound will be heard.
When another bubble is popped, the screen will fill with the color of that bubble and a different random sound will be heard.
When the crouching and standing activity starts, the screen will show the child standing on a small island, surrounded by water and several small fish of different colors.
The child will then crouch down in an effort to grab a fish.
When the child successfully grabs a fish, the fish will grow and take over the screen. This will be accompanied by a random sound.
The child will then stand and repeat the process until they have caught all of the fish.
