

# Work-in-Progress Report 2023

Suri LI

Because of global warming our horizon continued to rise until one day, we had to move under the sea as SEATIZEN.

# What I am doing?

1. Keep drawing my story book, now is the 4th one, and 8 pictures to go.
2. I made a very challenging change of my final presentation prototype. I am going to create a real space to make interactive with my audience.

### WHY I WANNA DOING THIS ?

Our Homeland is slowly being swallowed up by ocean due to global warming, protecting homeland land is a common issue for all human beings. That is why I want to deep dive with this topic. And make more attentions from people who still not take that problem serious yet.

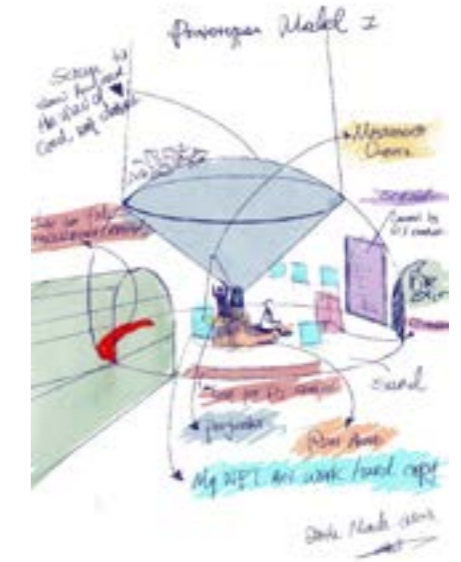

My Audience going to be the people who is interesting in Interactive art, people with children, people who care about global warming, and ESG?

I will create an immersive interactive art space, which will include all the technologies I think are meaningful, as well as artistic design directions, such as who will stand in a specific position and use actions to manipulate the direction the fish will go. In the space that I create, there will be a DJ Performance station, it come with three functions on this interface.

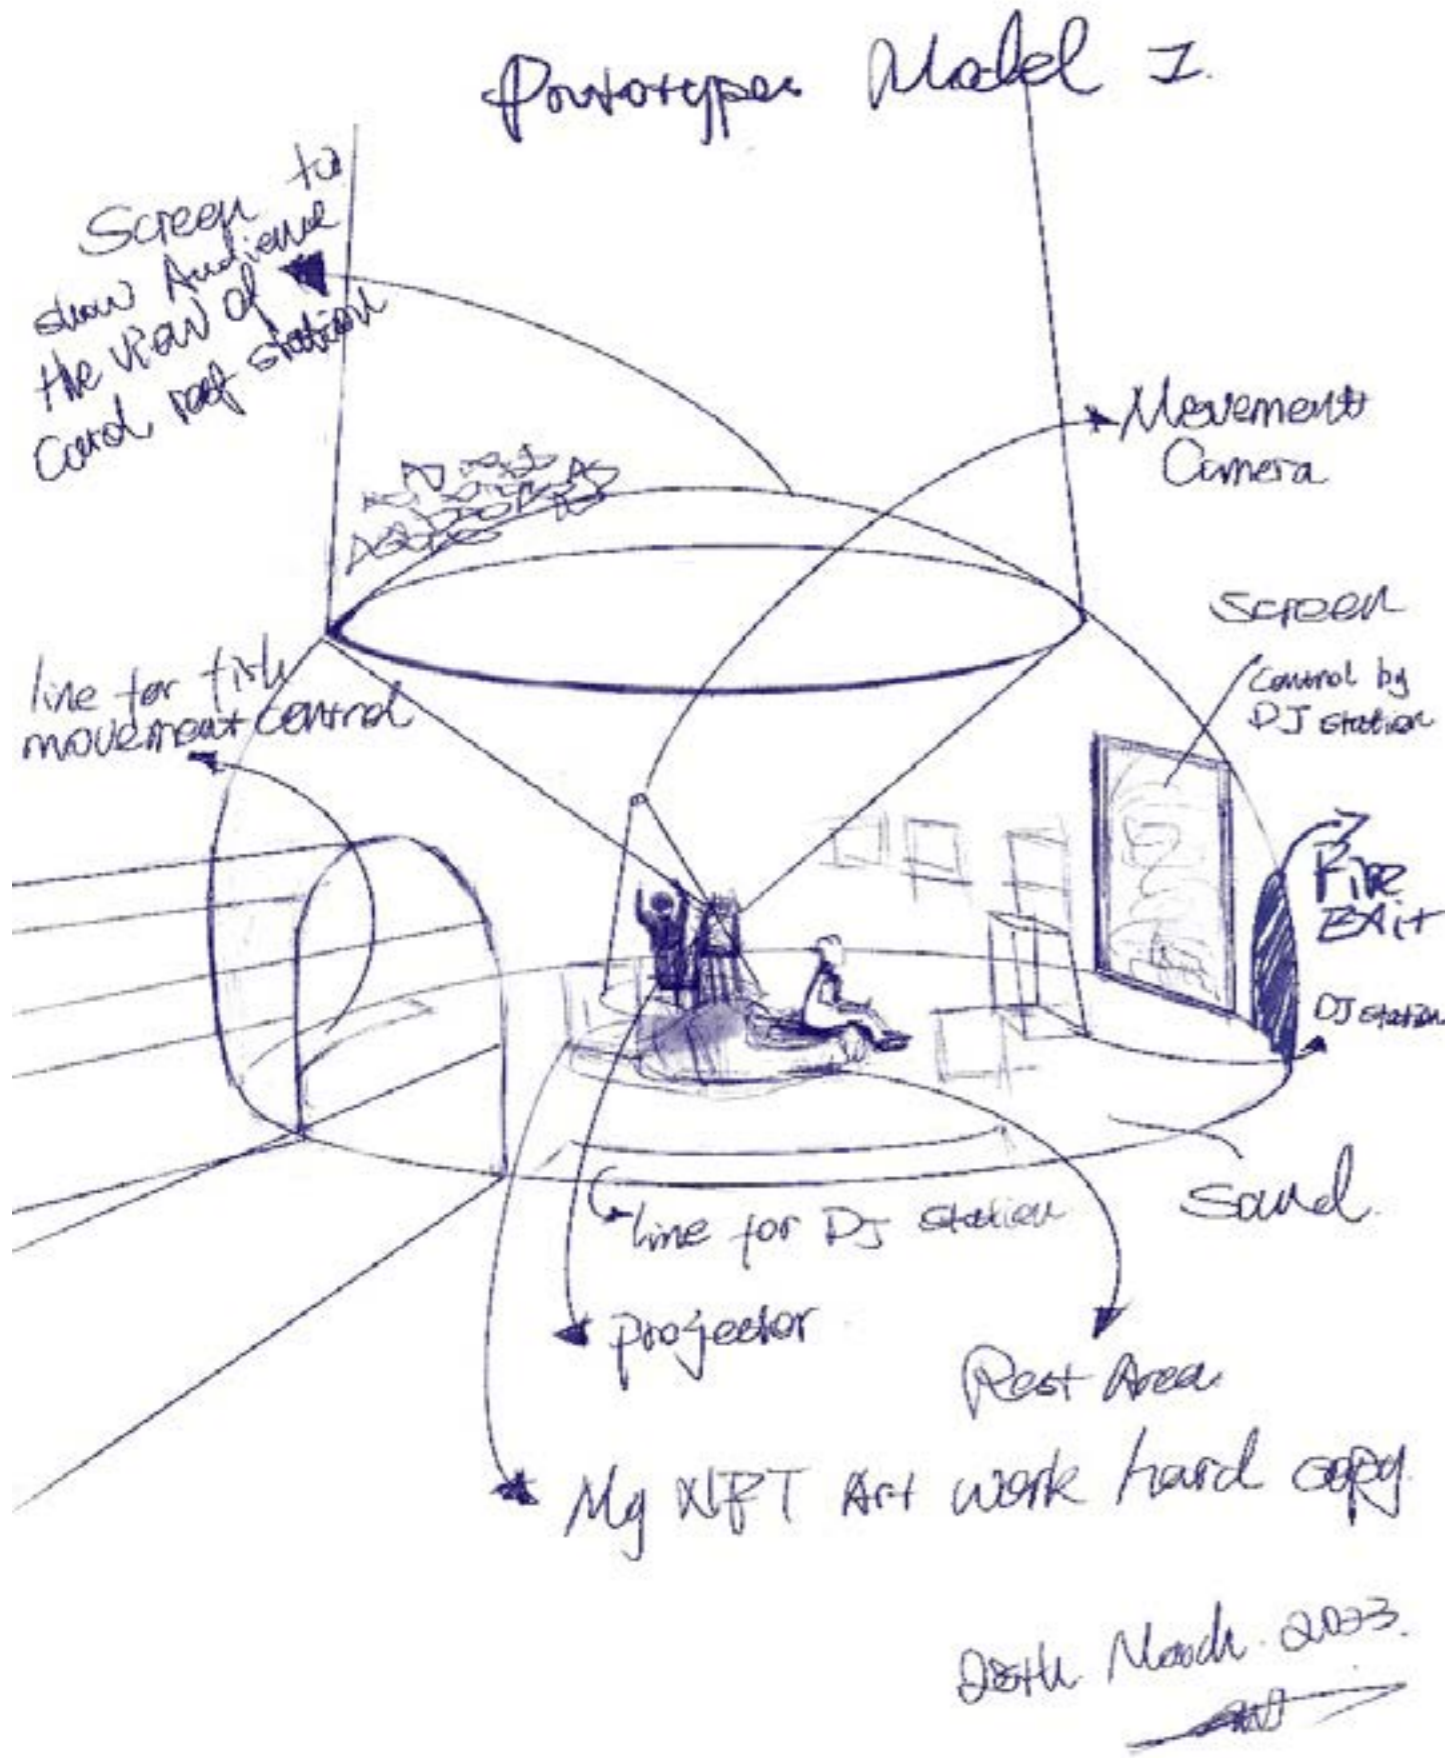

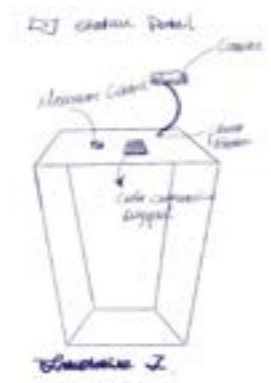

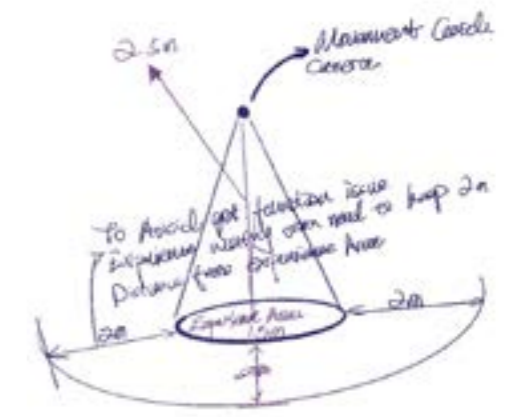

One is that visitors can customize the colors of the patterns on the display screen, just on the wall facing to the entrance, The other is to control the rhythm and direction of the pattern operation, so when people hear the BGM, and make the live vibe share with the other audience. And the last is the photo shooting button, it is for audience to record this remarkable moment as a SEATIZEN.

Why I want to make it happen though IMA?

I want to be an Artist, and the way I want to be is Intallation, and interactive art, because I think the way make people more impressive.

**Interacw II**  
 Audience can control fishes moving direction color size

# What do you know?

- . **Exhibition post prototype**
- . **The sense in the experience space during summer**
- . **The sound I am going to use**
